

## Agriculture

Size, location, elevation, climate, soil structure and crop rotation make every farm unique. Regarding this, making grain production machine cost-efficient and reliable is more and more important. Farm equipments operate under varying and harsh conditions. Mud, dust and debris. Extreme heat and cold. Rain and corrosive chemicals. Long period of inactivity, then intense periods of work.

## Edge

China is a large agricultural country with vast territory, climate, elevation, soil structure are also different, bearing application is also more demanding. LYC has more than 50 years of experiences in China markets, keep improve design and develop technology base on the customers feedbacks. For the entire agriculture industry, LYC bearing will aim in more precision, more reliability, less maintenance and less environmental pollution.

## Customer Cases

Millat YTO etc..
